Please Note:

The fuel must not contain halogenated organic compounds or heavy metals as a result of treatment with wood-preservatives or coatings.

Some of the permitted fuels for this appliance(s) now fall within the scope Directive 2000/76/EC on the incineration of waste (WID) and consequently use of these materials may make operation of the appliance subject to other regulations. Clean Air Act Exemption does not provide compliance with regulations introduced to implement WID. Guidance on WID can be obtained by contacting Defra, the Department of Environment Northern Ireland (DoE NI), Welsh Assembly Government (WAG) or Scottish Government. It is the responsibility of the appliance operator to ensure compliance with all relevant legislation.

This appliance was recommended for exemption but was accidentally not included in the Statutory Instrument (SI) laid in October. The appliance is therefore not legally exempt but has been assessed as meeting the requirements for exemption. Subject to the usual parliamentary checks and procedures Defra plans to amend the statutory instrument to correct the error and exempt the appliance in the near future.

As a result of devolution and subsequent legislation some appliances are no longer exempt in all regions when burning some of the fuels listed in this table as they are considered to fall within the scope of Directive 2000/76/EC on the incineration of waste (WID). The scope of each exemption should therefore be checked in the relevant legislation. It should be highlighted that if an appliance is exempt when burning material considered to fall within WID then the Clean Air Act exemption does not provide compliance with regulations introduced to implement WID as highlighted in note (2).
